Description

Some scores aren't correctly calculated.

ex: The select question allows a score of 20/10

This happens when all options are chosen even though some are not correct.

The score of those incorrect are added eitherway.

ex: The multiple choice allows a score of -10/10

This happens when the wrong choices are set with a negative score and overpower the positive scores.

I don't know if this is a bug or not.

It might be that some people would like this but then it might be a good extra option.

I suggest leaving the possibility to set negative scores, for guess correction.

History

#1 - 25/05/2010 14:21 - Anonymous

I'm going to try to eliminate the 20/10 scores.

This means that scores that are wrong and have a positive score are left out.

I'm going to leave the negative score as they are, for possible guess correction.
