Description			
While installing the database name is checked. A database name starting with a number is not allowed.			
I wanted to install on a hosted domain, where the database starts with a number.			
For testing I changed it, and this was the only problem I found for installation on the hosted domain.

- Status changed from Needs testing to Feature implemented

I've replaced the 2 files (database_install_wizard_page.class.php and install_wizard_process.class.php) in the install directory that are changed since the beta release.

I reinstalled Chamilo on the hosted space with the Db starting with a number: no protest now, installation OK...

So it is fixed...
