No longer blank page, it opens, but error on selecting SurveyContextRegistrationLink
Fatal error: Class 'repository\content_object\survey\Utilities' not found in
C:\wamp\www\chamilogoogle\repository\content_object\survey\php\survey_context_registration.class.php on line 105

- Status changed from New to Needs more info

Dear author

The information you provided is not sufficient to locate and/or reproduce the problem.

Please be so kind to read the following article on how to report bugs.
<http://support.chamilo.org/projects/chamilo-20/wiki/ReportingBugs>

#6 - 18/05/2011 13:57 - Anonymous

Well this post has been moving around as you can see above. Just read and you will know that it was/it a repo problem related to the survey application. As this application is now not installed in chamilo.hogent.be I cannot check whether this bug is still around.

#7 - 18/05/2011 14:23 - Anonymous

I knew it was in the repo, and I knew it was a survey issue (as stated in the header/other posts)... but still I have no steps indicating how to get to this actual problem, what steps to take to reproduce this issue, nor a URL with loads of additional information that could make finding the issue a lot less challenging.

I have spent the last 20 minutes inside the survey application (creating one), inside the repository (looking for the option mentioned 'SurveyContextRegistrationLink'), but to no avail, I simply cannot find the error page you are referring to.

A simple step-by-step comment on how to get to the issue, or a URL of the page where the issue happened (URL is different from the path in the error, the path shows us where the error happened, not where it was summoned).

All these small bits of information mentioned in the article 'how to report bugs' help us locate the problem within a few seconds.

#8 - 18/05/2011 14:38 - Anonymous

OK, you can continue lecturing if you want. This a **six** months old post, one of the 400+ I have posted.

I've just created an account on the hogent dev server (waldorf) to be able to check this again.

I took me 20 sec. to see that this bug is no longer relevant. It is clear that a lot has changed (happily enough) in the survey application.
