It's an interesting feature request but not easy to design (interface-wise). If we give such an option, who do we give it to? Are the students supposed to be able to clear their own results? (I don't think they should), are the admins able to do it? (if so, on what screen?)

The feature should be accessible to session coaches for learning paths followed by a student inside a session. The session coach should be able to delete the statistics of a learning path for a student. This can effectively be done without really removing the data of the first attempt, by adding a new item in lp_view table for this user and this learning path. Please ask me for more info before starting to work on this.
