| Description | | | |
| It looks like building a new theme is very hard to do. There are dozens and dozens of locations where theme folders remains and it looks like you have to alter them all manually in order to create a fully functional new theme... Can this be done more easily? | | | |

History

#1 - 04/03/2011 10:36 - Hans De Bisschop

- Tracker changed from Refactoring to Support
- Priority changed from Normal to Low
- Complexity set to Normal

The current structure is a direct result of the way the project is structured and conceptualized. There is no simple or easy workaround for this. Even if they all were in the same folder it would be a lot of files to adapt and them not being in the same folder is easily remedied with a good IDE. Ideally, somewhere in the far away future we would / could have some kind of tool to generate basic themes based on a list of properties filled out by the user, but for now it's just a lot of work.

#2 - 04/03/2011 15:35 - Laurent Opprecht

partial solution here: [#2973](#). It doesn't solve the complete issue but that's a start.

#3 - 01/04/2011 14:59 - Stefaan Vanbillemont

- Project changed from Chamilo LCMS Connect to Repository

#4 - 14/04/2011 15:33 - Stefaan Vanbillemont

- Target version set to 2.1.0

#5 - 13/01/2012 14:34 - Stefaan Vanbillemont

- Target version changed from 2.1.0 to Backlog (default)
