Description

I am going to implement bookmarks in the handbookapp. but it might be a good idea to not make this application-specific.

I was going to have a separate table in the handbook-app but I am now thinking it might be a good idea to have a "bookmark" content-object.

This content object could point to any content-object-publication on the system (store the publication id + application). this way I can still easily display a list of all handbook-bookmarks for a specific user in the handbook-app, but it could also be used for other things, like publishing a link to a complete handbook-publication in the webcms or linking to an assessment from a handbook or bookmark all the interesting portfolio's I want to follow, ...

there are some problems with this approach:

- bookmarks would be platform-specific and as content-objects can be exported this would lead to strange results
- when publications would be deleted, the bookmarks should be "notified" of this so you get some kind of warning "this resource was deleted by the owner".

any ideas?

History

#1 - 01/04/2011 14:56 - Stefaan Vanbillemont

- Project changed from Chamilo LCMS Connect to Repository

#2 - 14/04/2011 15:33 - Stefaan Vanbillemont

- Target version set to 2.1.0

#3 - 20/04/2011 16:15 - Nathalie Blocry

- Project changed from Repository to Handbook

- Target version deleted (2.1.0)

#4 - 24/05/2011 13:48 - Stefaan Vanbillemont

- Target version set to 2.1.0

#5 - 16/06/2011 14:34 - Sven Vanpoucke

- Target version changed from 2.1.0 to 103

#6 - 16/06/2011 14:38 - Nathalie Blocry

- Status changed from New to Feature implemented

- Target version changed from 103 to 166

this has been implemented as an extra content object

#7 - 13/01/2012 13:52 - Stefaan Vanbillemont

- Target version changed from 166 to 2.1.0
