

Courses - Bug #3218

Select question - invalid data retrieved

06/04/2011 09:39 - Michael Hosdez

Status:	Feature implemented	Start date:	06/04/2011
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	2.1.0	Spent time:	0.00 hour
Complexity:	Normal		
Description			
When the Select question is a "single select" question it works fine.			
3 scenarios:			
When platform language is English: It's possible to create a select question (multiple select) in an assessment (with and without hints)			
When platform language is Dutch and using NO "hint" in the select question (multiple select): "Invalid data retrieved from database" after creation, the Content Object seems to be created in the Repository but is corrupt, the error is still "Invalid data retrieved from database"			
When platform language is Dutch and using a "hint" in the select question (multiple select): "Invalid data retrieved from database" after creation, the Content Object is created in the Repository and works fine ...
