Description

In Dokeos 1.8 we have learning path items with embedded flash files. Like this:

```
<embed width="720" height="576" scale="" play="true" loop="true" menu="true" type="application/x-shockwave-flash" src="/courses/G02 Corrugated board machine wet end/document/ANIM/EG02_07A.swf"></embed>
```

This is usually not the way to import a flash file (normally with flash button in editor), but the course developers thought it was the fastest way

The flash files reside in a self named document folder in the same course

Our hope is that the learning path items are migrated in such a manner in wich they still work afterwards.
