<b>Description</b>			
There must be something wrong in the SQL queries. When loading the page, even on a local install with only a few users and 3 courses, it loads in about 8 seconds...

I tried to reproduce it but it seems to work fine ... need an example

Try [http://chamilo-dev.beeznest.com/main/session/?session\\_id=1](http://chamilo-dev.beeznest.com/main/session/?session_id=1) as admin/admin. It takes about 7 seconds to load...

5 seconds for me, that's slow not very slowly :)

On a computer like mine, that's about 5000 000 million cycles, so it's very slow :-)

Anyway, I'm moving it to the next version but I'm pretty sure the problem is that, in order to get the JavaScript tabs, we are generating the whole contents of those pages in one piece (all at once) with many statistics, live graphics, etc. This is most probably why it is slow.

Once we put that on <http://campus.chamilo.org>, it's going to kill the server, most probably.

Personally, I don't really mind having each tab loading separately (instead of having everything pre-loaded).

This is still being an issue? I just test it here and It seems to work fine

[http://stable.chamilo.org/main/session/index.php?session\\_id=9](http://stable.chamilo.org/main/session/index.php?session_id=9)

I need to analyse this one a big more. It seems to me like the slowness hasn't been improved much, but I need to analyse it. On the other side, this might lead to more debugging because it seems to me like some (useful) graphics that were there previously now disappeared. In any case, it's not urgent, so I'm moving it to 1.10
