

Chamilo LMS - Support #3785

Reminder before 1.8.8.4

06/08/2011 01:38 - Yannick Warnier

Status:	Bug resolved	Start date:	06/08/2011
Priority:	High	Due date:	08/08/2011
Assignee:		% Done:	100%
Category:		Estimated time:	2.00 hours
Target version:	1.8.8.4	Spent time:	6.77 hours
Complexity:	Normal	SCRUM pts - complexity:	?

Description

- review time shifting when creating an event very late at night or very early in the morning (spanning another day - seen on chamilodev after Julio's changes). The task delivery date is still not the one used in the calendar. It continues being the task creation date. This is wrong. ([#3692](#))
- review whether webservices by Marco Sousa have been inserted
- review webservices update by drupal guy
- review webservices by Latinux guy
- ~~review messaging from social network -> supposedly sent as anonymous user when originating from a specific user. At least, if sending with the campus e-mail address, the message (e-mail) should indicate who sent it as part of the body or the e-mail subject (it's better that way than sending it from the other user's e-mail directly, to avoid reverse-mx checking).~~
- error in some questions copy (tried on chamilodev) ([#3788](#))
- questions cannot be copied in group (the checkboxes stuff does not seem to work) ([#3789](#))
- links to previous reports developed for Ricoh have disappeared (where are they???) ([#3790](#))
- in dashboard, I get an error for main/gradebook/lib/flatview_data_generator.class.php on line 211 about a division by 0 ([#3791](#))
- somehow in thematic advance, when adding a new date, the edition box does not appear anymore, and the value stored (and shown) is "null" (in text) ([#3792](#))
- ~~Carlos says the period of visibility of a test does not use the timezone, which makes the period of visibility different from the period defined. I can't reproduce this.~~
- In homepage edition, it is impossible to upload a picture now (with the basic file manager). It says "Invalid directory /my_files (on <http://campus.chamilo.org>)"

#11 - 24/08/2011 17:01 - Julio Montoya

There are a lot of changes in the webservices I will invest a lot of time trying to understand the code and make it work with drupal? Need feedback what to do here. Basically there are changes of this sort:

New version: namespace, soapaction, style, use, and documentation variables added:

```
$s->register(  
    'WSCourse.DeleteCourse',  
    array('secret_key' => 'xsd:string', 'course_id_field_name' => 'xsd:string', 'course_id_value' => 'xsd:string'),  
    array(),  
    'urn:WSService', // namespace  
    'urn:WSService#WSCourse.DeleteCourse', // soapaction  
    'rpc', // style  
    'encoded', // use  
    'Delete a course in chamilo' // documentation  
);
```

Old version

```
$s->register(  
    'WSCourse.DeleteCourse',  
    array('secret_key' => 'xsd:string', 'course_id_field_name' => 'xsd:string', 'course_id_value' => 'xsd:string'),  
    array(),  
    'urn:WSService', // namespace  
    'urn:WSService#WSCourse.DeleteCourse', // soapaction  
    'rpc', // style  
    'encoded', // use  
    'Delete a course in chamilo' // documentation  
);
```

There are also some changes in the soap_user.php new variables added to the return array

```
'user_id_field_name' => array('name' => 'user_id_field_name', 'type' => 'xsd:string'),  
'user_id_value' => array('name' => 'user_id_value', 'type' => 'xsd:string'),
```

There are also some new functions in web_service_user.php

```

/**
 * Get information for a specific user and return to caller
 * Function registered as service. Returns strings in UTF-8.
 * @param string Secret_key/ignature (composed of the sha1(secret_key+security_key)
 * @param string User id field name = chamilo_user_id / chamilo_user_name
 * @param string User id value = integer of usernaam
 * @return array User Information
 */
public function UserInfo($secret_key, $user_id_field_name, $user_id_value) {

/**
 * Get a list of courses (code, url, title, teacher, language) for a specific
 * user and return to caller
 * Function registered as service. Returns strings in UTF-8.
 * @param string User name in Dokeos
 * @param string Signature (composed of the sha1(username+apikey)
 * @return array Courses list (code=>[title=>'title',url='http://...',teacher=>'...',language=>''],code=>[
...],...)
 */
public function CourseList($secret_key, $user_id_field_name, $user_id_value, $visibility = 'public,public-
registered,private,closed') {

/**
 * Get a list of events between two dates for the given username
 * Function registered as service. Returns strings in UTF-8.
 * @param string Username
 * @param string User's API key (the user's API key)
 * @param int Start date, in YYYYMMDD format
 * @param int End date, in YYYYMMDD format
 * @return array Events list
 */
public function EventsList($secret_key, $user_id_field_name, $user_id_value, $datestart = 0, $dateend = 0)
{

/**
 * Get a list of users of which the given conditions match with an = 'cond'
 * @param array $conditions a list of condition (exemple : status=>STUDENT)
 * @param array $order_by a list of fields on which sort
 * @return array An array with all users of the platform.
 * @todo optional course code parameter, optional sorting parameters...
 */
public function AllUsers($secret_key, $conditions=array(), $order_by=array(), $limit_from = false, $limit_
to = false) {

public function PurifyAndMakeUnique($secret_key, $username) {

```

That webservice folder is also a little bit messy, there are a lot of files called differently :

```

cm_soap_XXX.php
cm_webservice_XXX.php
soap_XXX.php
webservices_XXX.php

```

#12 - 25/08/2011 12:28 - Julio Montoya

- % Done changed from 60 to 70

New changes in the course restorer added, setting UTF8_CONVERT constant false by default, otherwise there will be a double conversion.

Yesterday in a test I couldn't see the result of a hotspot test I just took. Going to check that.

=> that seems to be a problem with my browser. Seems everything is normal.

Also, copying a multiple-choice question from one course to another seems to have lost the reference as to which answer is right.

=> Seems fixed by latest changes by Julio

When taking a test with two questions (literally indicated as "Question 1" and "Question 2", when seeing the results, it indicates "Question 2" and "Question 4"...

=> This seems to have been fixed with the latest commits by Julio
