

Repository - Usability #4984

Versions - exporting a versioned object to CPO breaks versioning

18/06/2012 13:51 - Anonymous

Status:	New	Start date:	18/06/2012
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Backlog (default)	Spent time:	0.00 hour
Description If you export an object with different versions, the resulting content_object.xml file in the CPO archive contains no version information (see attachment). When importing it back into the repository, an object is created for each previous version. Solutions: <ul style="list-style-type: none">• The format of XML must be changed to incorporate version information• Only the last version of the object should be exported• A warning should be displayed that version info will be lost
