

Personal Calendar - Bug #5032

import ical calendar file gives error

21/06/2012 13:06 - Anonymous

Status:	New	Start date:	21/06/2012
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Backlog (default)	Spent time:	0.00 hour
Complexity:	Normal		
Description			
Importer van ICAL-bestand in de persoonlijke kalender geeft deze fout:			
"Fout bij het laden van een component			
ComponentClass: common\extensions\repo_viewer\RepoViewerPublisherComponent			
Stacktrace:			
common\extensions\repo_viewer\RepoViewer publisher"			

History

#1 - 22/06/2012 09:56 - Stefaan Vanbillemont

- Target version set to Backlog (default)

#2 - 22/06/2012 12:38 - Parcifal Aertssen

- Status changed from New to Needs testing

You can only upload ics files. I tested this and it is working. However, when not selecting a file at all and clicking on import, I did get this error. This should be fixed now. Can you confirm?

#3 - 22/06/2012 12:42 - Parcifal Aertssen

- Project changed from Courses to Personal Calendar

#4 - 26/06/2012 13:58 - Michael Hosdez

- Status changed from Needs testing to New

When importing an iCal file from within the personal calendar without selecting a iCal file, this error is visible on my screen:

Fatal error: Cannot redeclare class vevent in E:\wamp\www\chamilo3\common\libraries\plugin\icalcreator\iCalcreator.class.php on line 7526

From within the repository there is a correct error message visible: UnsupportedFileFormat
