Description

There are (so) many situations in which a teacher might want to "randomly" pick one (or several) users within the list of students of their course.

Given we already have the list of students, it would be really easy to give this extra help to teachers.

The interface could be like this:

- In the users tool inside a course, add an icon "Random list" (represented, maybe, by a joker poker card?)
- On the page it leads to (titled "Random list generator"), give an empty text box that says: "Number of students to pick: " then a button to say "Generate list"
- The page refreshes and shows an ordered list (with incremental number) of the number of users requested (use the same kind of table as the normal users list)
- Allow the teacher to export to Excel or Print

I think this would give a nice "add-on" feature to teachers.
