

CDA - Bug #606

Variables with untrimmed prefix spaces makes terms list fail

13/02/2010 01:15 - Yannick Warnier

Status:	Needs more info	Start date:	13/02/2010
Priority:	High	Due date:	15/02/2010
Assignee:		% Done:	0%
Category:		Estimated time:	1.00 hour
Target version:	Backlog (default)	Spent time:	0.00 hour
Complexity:	Normal		
Description			
I've added " CountDoneAttendance" as a new variable in trad4all package, and now I'm unable (in the admin) to navigate further than the first page...			

History

#1 - 13/02/2010 01:16 - Yannick Warnier

The rest still seems to work. I can see the first page and I can still add variables, but when going to the second page (on a page of 40 terms), I get a empty list...

#2 - 18/02/2010 19:18 - Yannick Warnier

Actually it's more buggy than that... variables are also exported into the language files as:

```
$ CountDoneAttendance = "";
```

Which generates parse errors, of course...

#3 - 18/02/2010 22:33 - Yannick Warnier

This code **should** fix it (should trim variables before insertion)
