Description
During install and update, make sure Spanish is set as a parent language for Quechua, Basque (Euskera), Galician, Asturian and Catalan.
This way, all these languages will default to Spanish when a term is not translated (instead of English).

This is slightly complicated, as there is an AUTO_INCREMENT on the language.id column and we don't know in advance (not formally) the ID of the Spanish language before inserting it (and Asturian comes before Spanish).
This requires a series of UPDATE based on the ID of "Spanish" in the language table in db_main.sql, + a series of UPDATE in the update_db script.

History
#1 - 04/05/2015 20:47 - Yannick Warnier
- Status changed from New to Needs more info
- Assignee set to Julio Montoya
- Target version changed from 2.0 to 1.10.0
- % Done changed from 0 to 70

Added in https://github.com/chamilo/chamilo-lms/commit/cba72ddd1659b8cf5b43e1eed5aad928659ad11 and checked. Everything seems fine, although the query is based on a fixed ID for the main languages, so it might generate problems for old installations, but usually this should be solved by the fact that languages should be complete.

I have added a note to the changelog to mention that, but to avoid the issue I would need to update the Version20150504....php to query for the language ID before doing the update, and I'm not sure how I must do that.

Julio...help?
