Target version:	3.0	Spent time:	0.00 hour
Complexity:	Normal	SCRUM pts - complexity:	?

Description

Some (mostly corporate) users are more and more pressing about having an easier-to-reach indication of how much time the user has spent in a course.

An easy way to get this (but that requires some styling) is to add the following just before the last "return" statement of `banner.lib.php::return_breadcrumb()`:

```
// Show time in course
if ($user_id && isset($course_id) && !api_is_platform_admin() && !api_is_course_admin()) {
    $time = api_time_to_hms(Tracking::get_time_spent_on_the_course($user_id, $course_id, api_get_session_id()));
    $html .= '<span style="display:inline;float:right;margin-top:-26px;margin-right:10px;">'.$time.'</span>';
}
```

The only problem is that it appears on top of the "Student View" button when admin/teacher, which is why I added the `api_is_platform_admin()` and `api_is_course_admin()` checks in the condition.

Find a good way to add it without conflicting with the button, and enabling the teacher to choose whether he wants it or not in his course (`course_settings`).
