Complexity:	Normal	SCRUM pts - complexity:	?

Description

This class is named "Database" as well as the class located here: database.lib.php. We're using composer to load classes and there's obviously a conflict.

I suggest to remove this file and focusing the new developments in order to work with Doctrine ORM.

Associated revisions

Revision 5242b9aa - 19/04/2013 18:26 - Julio Montoya

Renaming "Database" class name due some conflicts with the autoloader see #6099
