Target version:	LCMS 4 Beta		

Description

I have downloaded the latest LCMS version (changeset: 3556:a66f98c1d49d)

I logged in and created a course under "Education" --> "Courses", and enabled all the tools.

I went to the repository, selected the "Welcome" announcement, I clicked the "Publish" button, then came the following error:

I tried other content-objects in the repository, and resulted the same error. btw, I did not turn on the CAS authentication (see attachment)

Fatal error: Class 'application\cas_user\CasUserManager' not found in

Try to install Chamilo LCMS with the courses application as only selected application. This should exclude the less working applications and should make sure that the basic functionality works.
