#### Description

I've followed the procedure described in the document with the download.

When I add the configuration.php from the LCMS 3 installation and go to index.php, I get this error:

```
Fatal error: Class 'application\weblcms\NewDocuments' not found in  
/opt/www/vs07001/web/update.kajakaja.be/core/home/php/lib/block.class.php on line 56
```

It has something to do with the update procedure because when I remove configuration.php, I can do a clean install without errors.

Just to make sure, these are my configuration settings for php (screenshot from control panel VPS)
