#### Description

Hi guys,

A forum user told me that He gets PDF export without images, as this was an old bug that you fixed very fast I was confident this couldn't happen anymore :)

I use 1.9.8.2 downloaded a few days ago from Github working locally (127.0.0.1) on a WAMP server.  
The platform works well, so no issue with PHP/SQL.... version :)

I created a fake course and added a LP done with the internal authoring tool, and then a second LP (inside the same course) created with an external tool and uploaded on the platform. The software I used is CourseLab....

Both appear in the LP and work fine, but, when I click on PDF icon (from LP section), the course I created internally is exported fine (images + text, regardless the link to the images is absolute or relative), but the imported course is not PDF exported (the pdf exports only a blank page).

The difference I see between the 2 is:

- the integrated tool generates the tree into "document" folder (under the course)
- the external tool upload is done under "scorm" (under the course).

Here are the paths in case that could help :)

cham198\courses\TESTEXPORTPDF\scorm => path that allows you to access to the uploaded LP directory  
cham198\courses\TESTEXPORTPDF\document\learning\_path => Path to access to the internal tool course directory

On disposal if I'm not clear or if you need other things :)

Thanks to you all!

- File premier\_courselab.zip added

Hello,  
Here is the file...  
premier\_courselab.zip

##### #4 - 17/07/2014 22:46 - Angel Quiroz

- File 7209.png added

- Status changed from Assigned to Rejected - Abandoned

In this particular case with CourseLab, due to that the final HTML code is generated with JavaScript, the HTML *body* is empty when you try to export to PDF, then an empty PDF is generated

```
1 <html xmlns:v="urn:schemas-microsoft-com:vml" xmlns:o="urn:schemas-microsoft-com:office:office">
2 <head>
3 <title></title>
4 <style>
5 v\:* {behavior:url(#default#VML);}
