Target version:	3.0	Spent time:	0.00 hour
Complexity:	Normal	SCRUM pts - complexity:	?

Description

A heatmap is a simple tool to analyse the usability of an interface.

By creating a heatmap plugin, we could allow admins to get an idea of which elements are the most complicated in a portal's interface.

One of BeezNest's staff developed a heatmap plugin for another circumstances, that works by simply adding a JS library in the <head> tag and taking (manually) screenshots of the screens we want. The heatmap plugin is not finished and does not meet Chamilo's quality standard nor its coding conventions, but it is a start: <https://github.com/beezenest/heatmap>

History
