Description

Hello,

I wonder how I create private links cms.

My problem is:
I want to create private links, ie, only after the user connects he can see a link on a cms page (meaning a page created **inside the homepage**).

Here's an example:

- Optional
- Use `::private` at the end of the link to show it only to logged-in users

I tried:
<http://www.chamilo.org/>:
<http://www.chamilo.org/::private>

What am I doing wrong?

From already thank you very
Marcelo Bassuma

Note by Yannick:

The idea (as in the video added by Marcelo) is to add a new page **without** a link, but to be able to set it as private.

At the moment, I believe the code checks if there is a link, and if so, it sends the user to the link itself. If there is **no link**, then it sends the user to the content created locally. However, this prevents the system for detecting a `::private` without link...

Make sure using `"http://::private"` or simply `"::private"` sends the user to the content page, but only shows the link to connected users.

History

Hi Marcelo,
If you have Chamilo LMS 1.9.8, it should work with the `::private` suffix, just as you mention. It won't work on any prior version, though.

- File *chamilo cms.mp4* added

Hello, Yannick Warnier very pleased to talk to you.
Yes, I'm using the latest stable version of chamilo v1.9.8.
I leave your `http://::private`, Yes the link only appears for who's logged more gives error on the page.
Now when I leave `http://`, the link appears for anyone and works very well.
By faver made a video about it.
thank you so much
Marcelo Bassuma

#3 - 23/09/2014 00:11 - Yannick Warnier

- Subject changed from *How to create private links cms* to *How to create private links to local page in main menu*
- Description updated
- Category set to *Administration*
- Status changed from *New* to *Assigned*
- Assignee set to *Angel Quiroz*
- Target version set to *1.9.10*

OK, now I understand!

You are putting a link as "http://::private" but in fact it is a private **page**.

I think you are right: we didn't plan for this case.

I'm re-editing your bug report so it is clearer.

En el futuro, si quieres, puedes reportar los problemas en portugués, deberíamos poder entenderte mejor (y responder en español).

#4 - 23/09/2014 01:37 - Tomas Rodrigues

Oi,
Desculpe-me estou usando o google tradutor do português Brasil para o inglês, sendo assim, não sei como ele traduz.
Eu errei em escolher o setor. Era para suporte e não bug. Erro meu.
Agora, eu entendi o que você fala, só funciona para páginas externas. Fiz teste e está ok. <http://chamilo.org::private> 100%
Obrigado pela resposta rápida
Marcelo Bassuma

- % Done changed from 0 to 10

He probado agregando validación para enlaces vacíos privados (http://::private y https://private)
Pero las nuevas tabs se agregan como públicas

Sigo arreglando este bug

#6 - 04/10/2014 00:18 - Angel Quiroz

No he podido solucionar el bug, me sigue registrando como públicas

Tampoco puedo eliminar los enlaces creados. No sé si es sólo mi problema o es otro bug

#7 - 07/10/2014 23:33 - Angel Quiroz

- % Done changed from 10 to 20

He logrado registrar enlaces privados vacíos

Pero fatal validar que estos enlaces no sean accesibles cuando el usuario ha cerrado sesión. Es decir, que si registro un <https://::private> con nombre 'PrivEmpty' me genera un tab en el menú con el enlace a index.php?include=PrivEmpty_spanish.html. Y cuando cierro sesión, todavía se puede ingresar a esa URL

Olá,
Eu fiz as alterações e testei aqui o resultado é este:

1. Agora posso excluir os links cms criados.
2. Se o usuário copiar o link privado gerado, sim é verdade, ele pode acessar mesmo não tanto logado.
3. Tudo que eu criar dentro da caixa de conteúdo ele salva, mais some quando você quer editar

Saudações,
Marcelo Bassuma

- Status changed from Assigned to Feature implemented

- % Done changed from 60 to 100

Hola Marcelo,

Entendemos lo que explicas, pero lamentablemente no podemos hacer esto en Chamilo 1.9. En la versión principal siguiente de Chamilo (para Junio 2015) tendremos un sistema de gestión CMS más avanzado que probablemente te permita hacer esto.

Por todo lo explicado, cierro esta tarea ahora. Gracias por tu participación

Oi,

Tudo bem, vamos aguardar a nova versão. Mais quero deixar claro que o Chamilo 1.9.8 está ótimo, bonito com os novos modelos Style, vários recursos, etc.

Parabéns pelo trabalho.

Marcelo Bassuma
