

Chamilo LMS - Bug #7775

Uploading new CSS style requires a composer install

15/07/2015 07:39 - Yannick Warnier

Description

When uploading a new CSS style through the platform settings configuration page (example attached), it is necessary to launch a "composer install" command manually to be able to see the style.

Could we find a way to avoid this? (for example copying the style to web/ when uploaded through the web form?)

This will require that the web/css/themes folder will be writable in the installation process.

Or that we check the permissions before offering the possibility to upload, indicating in the upload page that this folder must be writeable. Although I would prefer that it be required during installation for now (otherwise it's a bit confusing for users).

OK, you have my agreement to set it as a requirement (even if it goes against our simplification :-))

#5 - 16/07/2015 15:05 - Julio Montoya

- Status changed from Assigned to Needs more info

I just applied a fix.

1. The web folder must be writeable (asked in the installation process)
2. When upload a new css theme the folder is copied here:

```
app/Resources/public/css/themes
```

and then mirrored here: web/css/themes/cancun

So we can still delete web/* and then execute composer update, the files will be auto generate.

#6 - 07/08/2015 00:17 - Yannick Warnier

- Status changed from Needs more info to Bug resolved

- % Done changed from 0 to 100

Perfect. Long live the Montoyator!
