Status:	New	Start date:	06/10/2015
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Global / Others / Misc	Estimated time:	0.00 hour
Target version:	3.0	Spent time:	0.00 hour
Complexity:	Normal	SCRUM pts - complexity:	?

Description

Develop an experimental feature that allows you to translate an HTML document (or any CKEditor section) from one language to another, using one of these APIs:

- <http://mymemory.translated.net/api/get?q=Hello%20World!&langpair=en|it> (also check the Wordpress plugin here: <http://www.translatorbox.com/google-text-translator-alternative-for-wordpress/>)
- <http://www.webservicex.net/ws/wsdetails.aspx?wsid=63>

Ideally, this should be an optional feature (settings_current "text_inline_translator") and should appear as an additional icon in CKeditor and in the documents list. When clicked, a modal window appears letting you select languages ("to" and "from") and then confirm. Confirmation should create a new document with the translated text.

Clearly, at a first stage, this will not be able to translate a structured HTML document, but let's start by making something more or less functional (send a stripped-down text and put everything into a plain text translation) and then we'll iterate to improve.

History

#1 - 06/10/2015 16:18 - Yannick Warnier

- Target version changed from 1.10.0 to 2.0

#2 - 01/02/2016 00:59 - Yannick Warnier

- Target version changed from 2.0 to 3.0
