Description			
Good Morning,			
I installed the latest version of Chamilo, and by adding a course and opening the learning route, the page is not loaded and returns a 500 error.			
Analyzing the server logs, reports that the error occurs in the lp_view.php file, line 197.			
I installed the version locally and it works, however, on the server is this error appearing, can you tell me what it can be?
